

Kitty Toe Ruane

February 26, 2026

Our oldest occupant, a roughly 15-16 year old female cat. We found her as a stray on Frozen Toe Lane in Venango County in September 2011 and aptly named her Frozen Toe. That name evolved into Kitty Toe and quickly nicknamed The Gray Stray.

The calmest of all our animals who only awoke to eat and drink, ruled the household over all the others. Even with visitors to the house she wouldn't bother moving from her spot and sometimes was thought to be a stuffed animal due to lack of movement, and it wasn't unusual for her to fall asleep on the exam table waiting to be seen by the veterinarian.

As the animal kingdom has it, someone is number one, and she was it. Her extreme passive nature was interrupted only if any dog or cat in the house would cross her, receiving a rapid correction, even up to her last few days.

She was a good traveler and required no carrier while in a vehicle. With no interest in looking out the window, she just went along for the ride on the seat or on the floor until destination arrival.

Most of her life she had a chronic thyroid condition that eventually lead to kidney problems, to which she started showing in her last few months. Despite lifelong treatments, she eventually withered down to almost nothing. She was

Mommy's cat from the beginning and as the script was written, her time also ended with Lin at her side.
