“ My husband found Odie in the snow back in January of 2009. I often wondered how could a small kitten (I think he was about 6 weeks old) be all alone in the snow. Of course, we gave him a home. At that point, he was kitty number 5 in our home. He always wanted to be warm. He would lay on the air vents when the heat was on. As he gotten older, he health started to go down hill. His back legs were getting weak. The vet said he developed a neurological condition. An MRI would cost about \$4,000.00. They told us to keep a check on his condition. He was getting worse towards the end. We helped him cross the Rainbow Bridge on December 26, 2022 at the age of 14.
